What is Nimble ?

Nimble combines UPI and QR codes to make payments even more faster, accessible and enjoyable experience.

How ?

Step 1: Payee generates a bill and shares it with Payer in form of QR

Step 2: Payer scans the QR code and decodes the information held within

Step 3: Payer confirms the bill and pays it through UPI implemented apps.

What is inside an QR code ?

QR code encodes all the details that are necessary for transaction and also the bill.

QR code generated by Nimble will have
1. Payee details
2. Bill items and amount
3. Payer details (optional)

Why is Nimble necessary ?

Nimble is the perfection of IMPS.

Nimble eliminates the left out need of typing in any sort of information even VPAs, Adhar numbers and amounts.

Through Nimble transactions will be even more hassle free and fast.

You do not need to enter Payer, Payee, amount data all gets transferred in the form QR codes which takes seconds to scan.

A Vision which is Nimble

Our team shares a vision where each transaction that we do is fast, secure and easy to record.

1. Nimble eliminates the need of 'PAPER'. The bills get transferred electronically.
2. Maintain record of your payments, and make a smart decisions.
3. Pay money seamlessly to people, whether to a pizza delivery guy or a Cab driver, or to a Point Of Sales systems at shopping centers, in a blink.

Nimble Everyday

Everyday transactions can be done in a jiffy.

Also each and every transaction will be recorded to analyze expenses later.
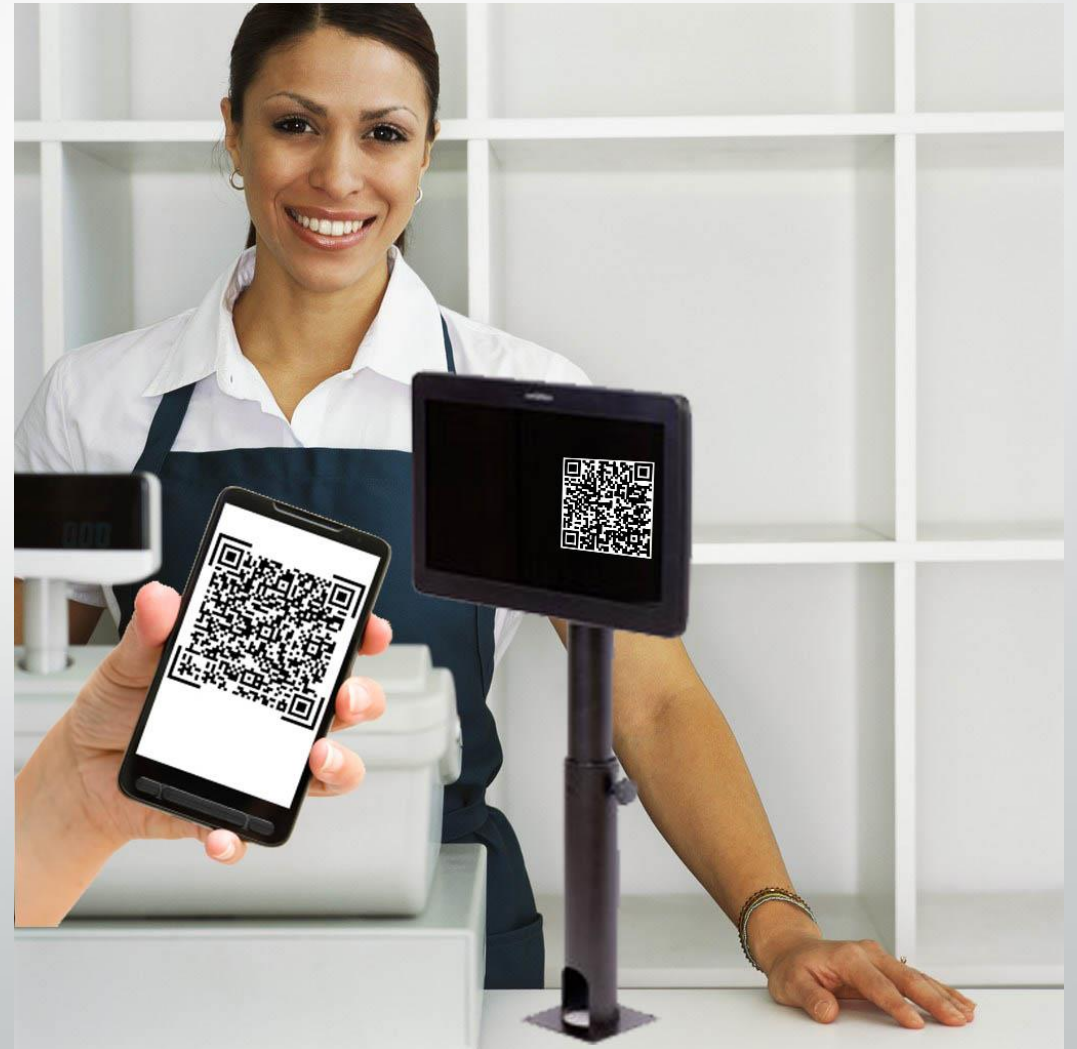

Nimble Everyday

Use Nimble to simplify life.

Nimble @ POS

One of our major target while developing Nimble was to change the way we pay bills at POS systems.

We want to minimize the dependency at paper bills, make carrying bill easier and of course payment easier.

Nimble is POS!

We have developed Nimble to resemble a POS sale system software.

You simple create the bill by adding items and tap to generate QR.

You guessed right! Complete POS system is our next milestone.

Confirm Payment

Bill Details

Your Name:	9755902119
Transaction Id:	1619884329
Amount:	330.0

| 1 | Donuts | 3 | 70.0 | 210.0 |
| 2 | Apple Pie | 1 | 120.0 | 120.0 |

| Chocolate Shake | 1 | 80 | ADD |

GENEERATE BILL   for 'Payer VPA'

Advantages

Reduce Dependency on Paper Bills: I cannot stress enough on this one. We waste so much paper on bills which ultimately gets lost, torn or fades away. Many companies are already shifting to e-bills, Nimble is another step foreword.

Record Each and Every Expense: We need a unified record system to maintain our transaction data. Through Nimble we can record this data, which will also contain your day to day expenses like taxi, food bill at canteens or even your haircut expense.

More Secure and Fast: We reduce the need to type in details, also encode details into QR which cannot be read by third-person standing behind you. Not only this, data itself can be encrypted format even before getting encoded as QR.

What is next ?

Nimble when complete, will become people preferred to make payments, record transactions and do many other things.

1. A complete POS system that replace conventional methods and paper dependency.
2. Handheld POS solution, where cashier scans the item barcode and bill is generated, for small retails who cannot afford POS systems but surely can afford smartphone.
3. Bill splitting feature, would it not be great if we can split restaurant bill and pay. Through Nimble you will able to do it.
4. Offline wallet transactions, to make nimble accessible event without internet.

Last words

For us, Nimble is a way of life. We vision it as inherent part of our smart life.

Thanks!
